

ROWDYHACKS XII · WORKSHOP

CASE NO. XII

The Website Heist

Live on Cloudflare in under 30 minutes

Zaquariah Holland · Swivel · 2026

HI, I'M ZAQ

Zaquariah Holland

Senior Software Engineer

Swivel

Chair

ACM San Antonio

Community Director

DEVSA

LinkedIn
Connect

GitHub
Examples

THE GOAL

Build with AI, quickly

Start with a plan

Design, requirements, rules

Prompt in small slices

One piece at a time

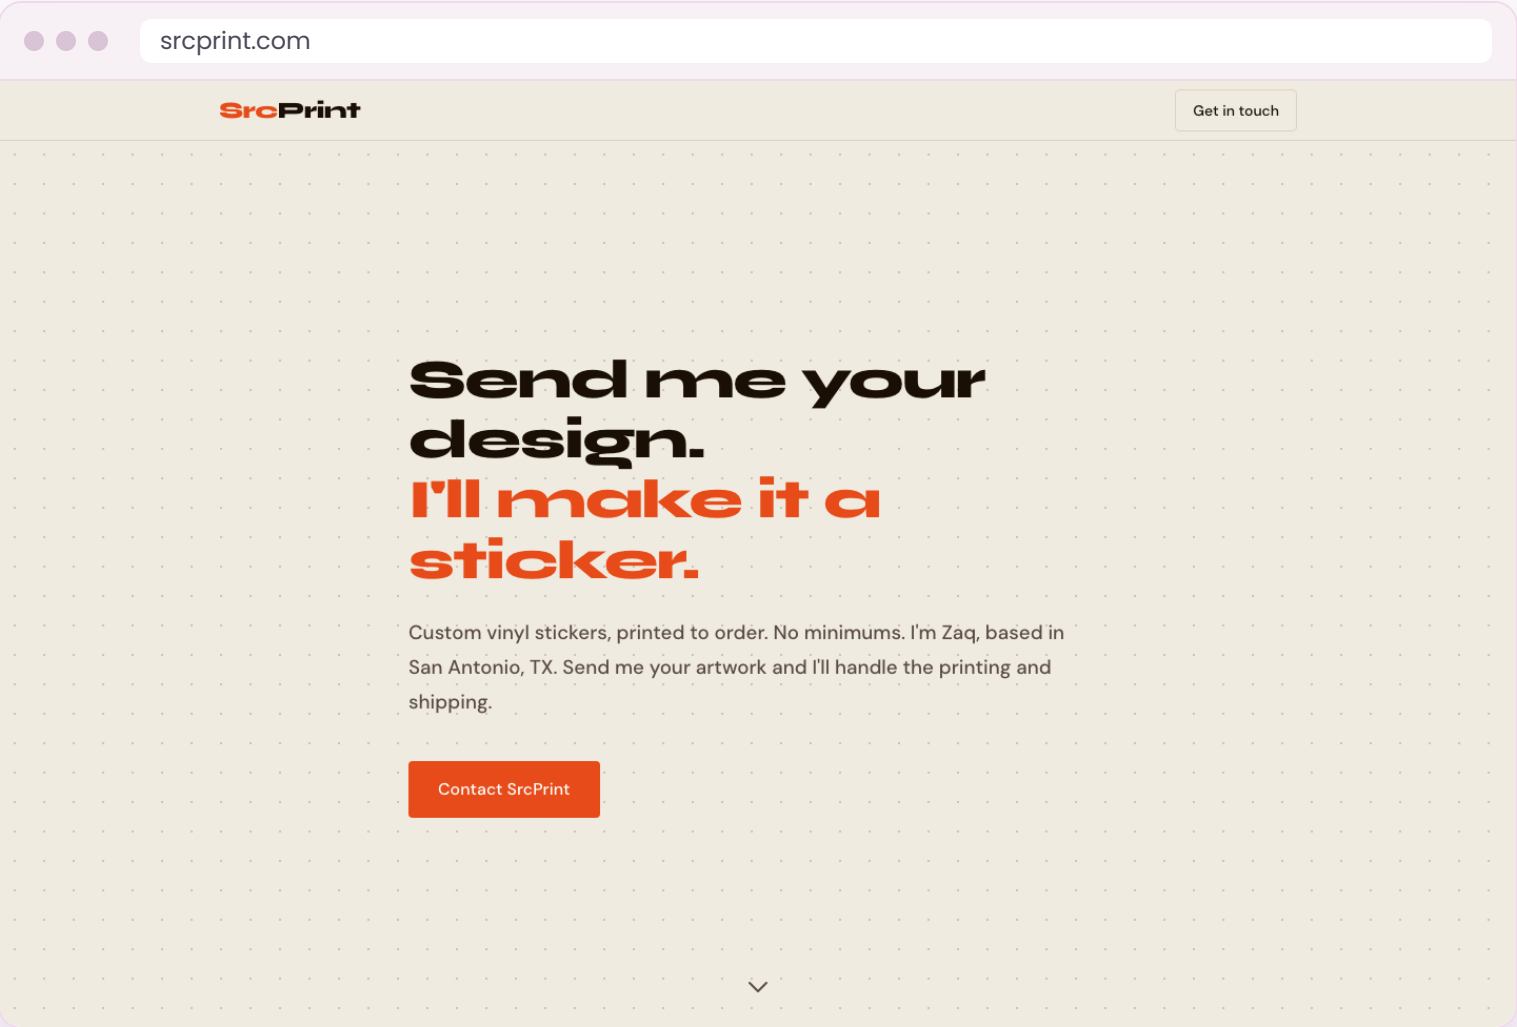

Ship early

A live URL after the first slice

EXAMPLE 1

srcprint.com

STATIC SITE

< 1 hr

Design to deployed

HOW

The recipe

- 1 Decide the design**
The hard part
- 2 Write the rules down**
Design spec and CLAUDE.md
- 3 Scaffold and wire up deploys**
Tagged as demo-start
- 4 Prompt in slices**
What you'll watch live

MY SETUP

The stack

Claude Code
The AI coding agent

VS Code
The editor

React and Vite
Front end

Tailwind
Styling

Cloudflare
Workers and D1

GitHub Actions
Deploys on every push

LEVEL UP

Skills

Saved instructions the AI loads when the task fits

grill-me

Interviews you until the idea is clear

PLANNING

frontend-design

Pushes the UI past generic defaults

DESIGN

superpowers

Plans and subagents for multi-step work

WORKFLOW

This deck: planned with grill-me , built with my own skill, zaq-presents

BEFORE WE START

Already done

Most of it was quick. Deciding on the design wasn't.

Design

Layout, motion, every screen

Requirements

What it does, security rules

Scaffold

React, Vite, tokens, base components

Pipeline

GitHub Actions to Cloudflare

WHAT WE'RE BUILDING

Hackerboard

Scan. Type a name. Join the board.

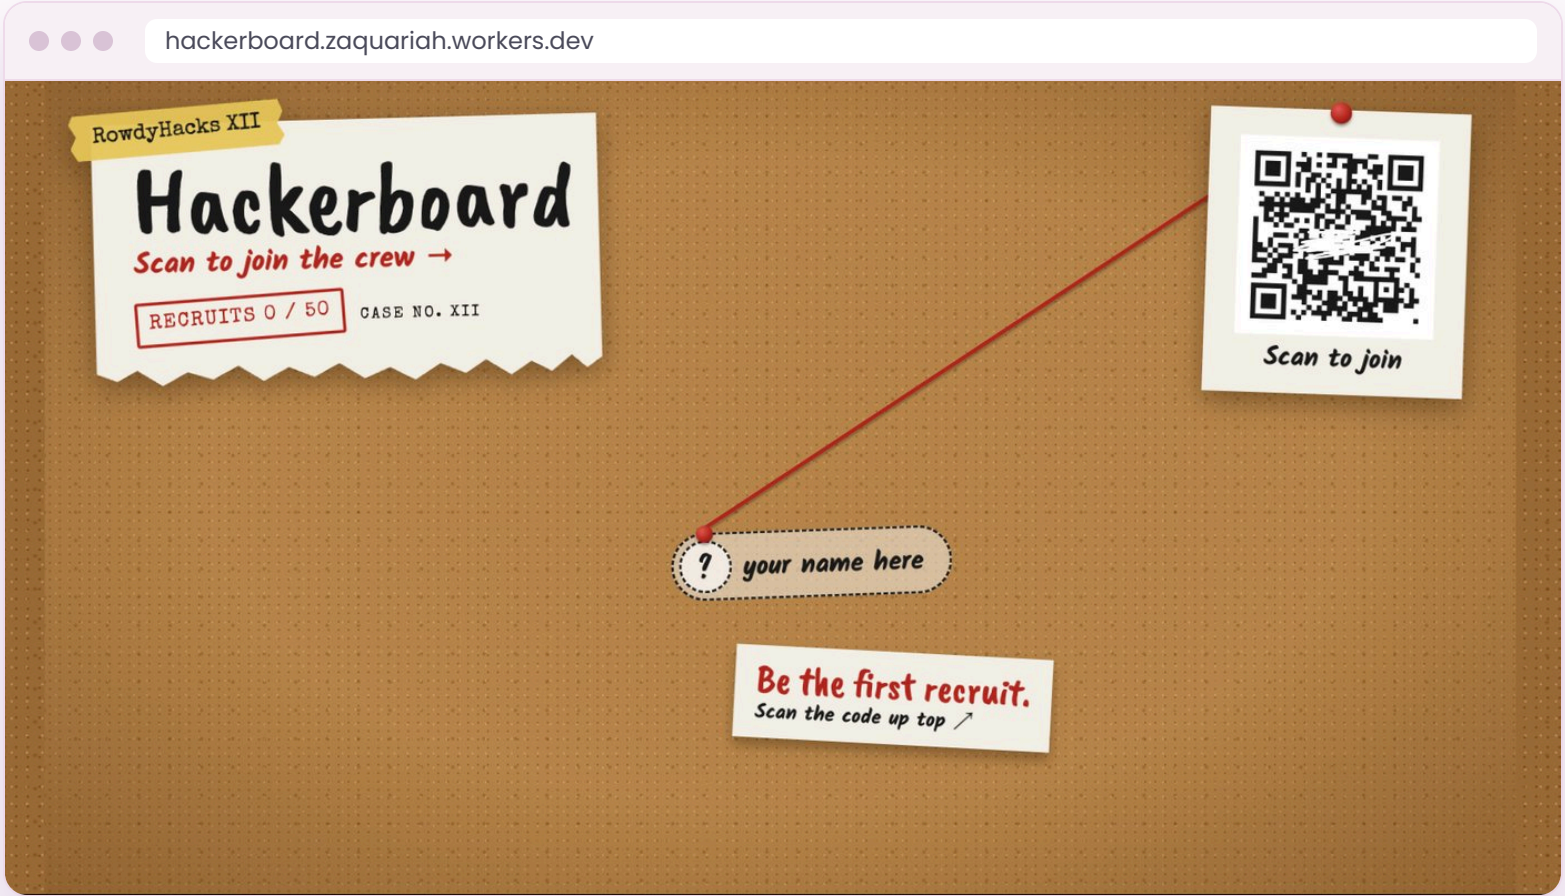

- 01

Board and join page
- 02

Ship it
- 03

API and database
- 04

Make it alive

LIVE DEMO

Switch to VS Code

WHAT JUST HAPPENED

Under 10 prompts, live

The prep made prompts short

Every push deployed itself

Own Worker and database per branch

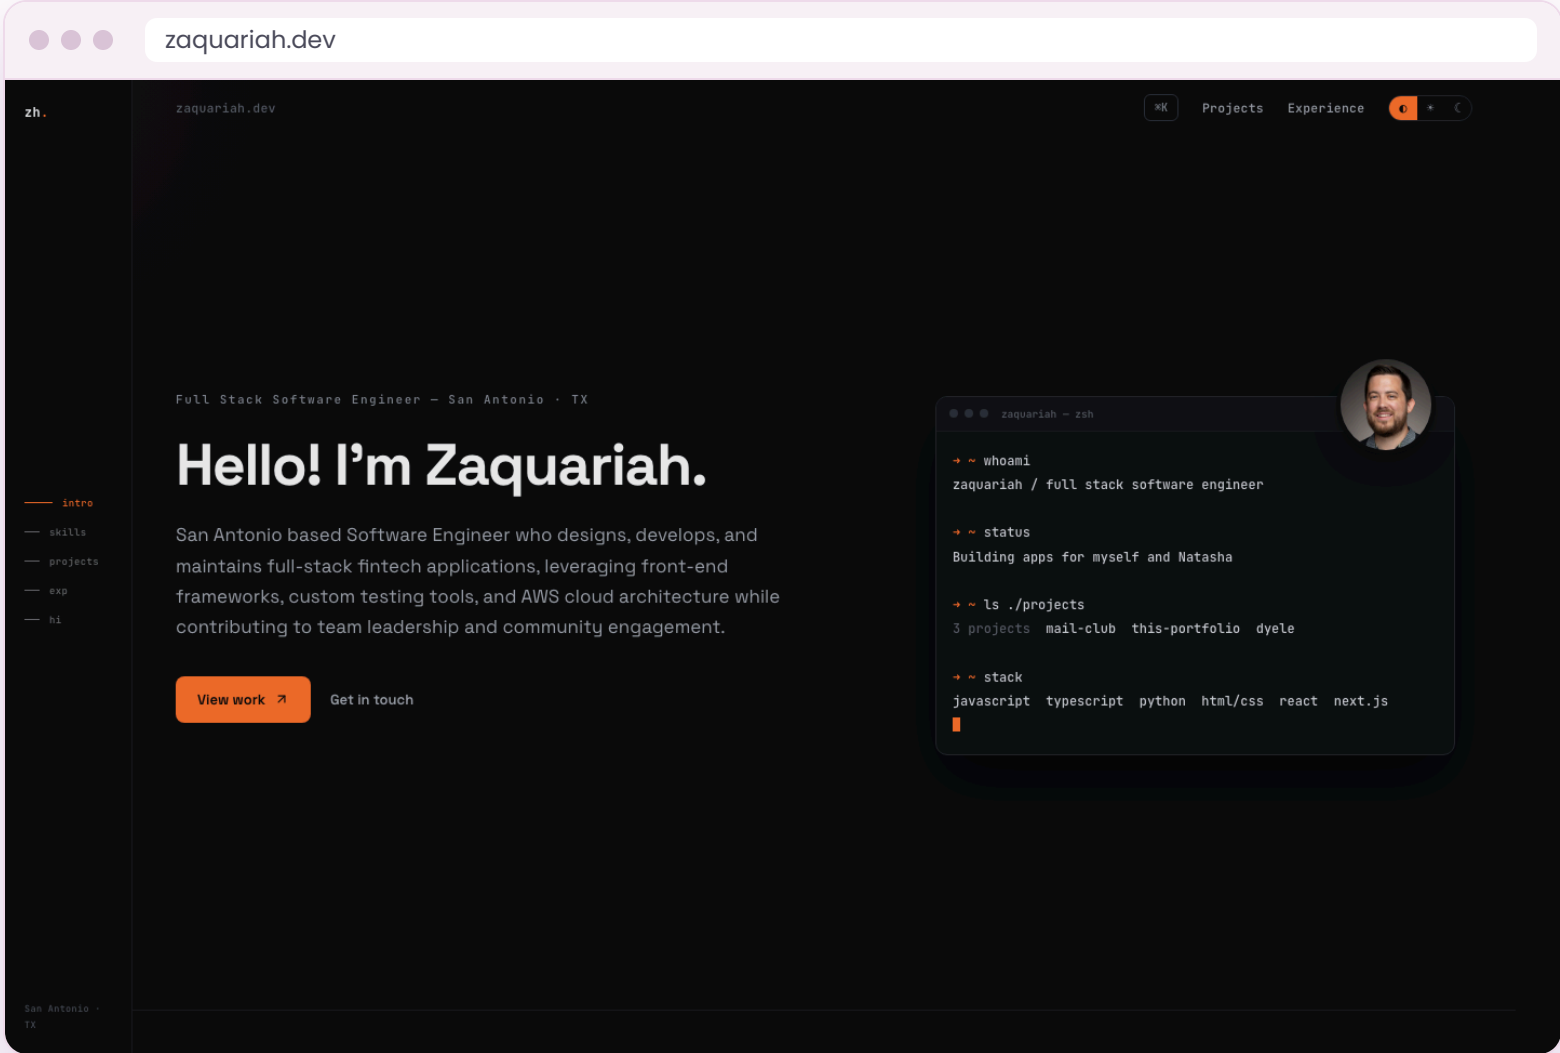

Security written down once

Applied to every endpoint

EXAMPLE 2

zaquariah.dev

SMALL
srcprint.com
Under an hour

MEDIUM
Hackerboard
Under 30 minutes

LARGE
zaquariah.dev
Way more work. Deploy your own copy.

TAKE IT HOME

Deploy your own

1 Fork the repo

`github.com/Zaqttack/hackerboard`

2 Make a Cloudflare API token

Workers Scripts: Edit, D1: Edit

3 Add GitHub secrets

`CLOUDFLARE_API_TOKEN` `CLOUDFLARE_ACCOUNT_ID` `ADMIN_KEY`

4 Push to main

The workflow does the rest

5 Replay the demo

Every prompt is in `docs/DEMO.md`

TAKEAWAYS

Remember this

Spend your effort on the design

Write the rules down once

Deploy after every slice

PRIZE ROUND

Win exclusive swag

Four questions

PRIZE ROUND · 1 OF 4 · WORKSHOP

Which Cloudflare database did our app use?

ANSWER · 1 OF 4 · WORKSHOP

D1

PRIZE ROUND · 2 OF 4 · SWIVEL

Swivel is part of which larger company?

ANSWER · 2 OF 4 · SWIVEL

SWBC

PRIZE ROUND · 3 OF 4 · HEIST MOVIE

In Inception, what does Cobb spin to test if he's dreaming?

ANSWER · 3 OF 4 · HEIST MOVIE

A spinning top

His totem

PRIZE ROUND · 4 OF 4 · WORKSHOP

What runs the deploy on every push?

ANSWER · 4 OF 4 · WORKSHOP
